the other suits. You don't care which he leads because you can now win 8 more tricks and make your contract.

South is to play 3NT. West leads the ♠3. East wins the first trick with the ♠A and returns the ♠8.

Winners: ♠=1 ♥=2 ♦=1 ♣=3 Total = 7

You can win 3 more ♦ tricks if the finesse works, but even if it doesn't work you can still get the 2 that you need. Of course if East does win the ♦K it would sure be great if he had no ♠ to lead. So you duck the second ♠ and take your ♠K when they play a third round.

After winning the ♠K you are conveniently in your hand, so you play the ♦Q and let it ride when West plays a low card. Alas, East takes the trick with his ♦K.

It's too bad the finesse didn't work, but it's not too too bad! Because East is out of ♠s and must lead one of

As long as you were going to finesse into East you could establish the ♦s without allowing West to gain the lead.

And as long as you had held up on the ♠K until the third round you could ensure that East was out of ♠s if he had started with only 3.

Win with dummy's ♠Q and force out the ♣A.

The rest of the tricks are yours, nine in all.

If East had only held 2 ♦s it would have been OK to hold up your ♦A just once.

But with this layout you needed to hold up twice.

South is to play 3NT. West leads the ♦K.

Winners: ♠=3 ♥=2 ♦=1 ♣=0 Total = 6

You will need some ♣ tricks to make the contract. If West has 5 ♦s and also the ♣A then you will go down. It doesn't matter if he has the ♣Q because you can finesse him out of that.

But in the case where East has both the ♣ A Q you need to make sure he has no ♦ when he takes his first trick. So hold up the ♦A until the third round, everybody following.

Now start on the ♣s. Play your ♣9 and let it ride. East wins the ♣Q and returns a ♠. Good, he didn't have the fourth ♦.
