 at trick 3.

Then start running the ♦ suit.

This is the situation after you have unblocked dummy's ♣A and then played 5 ♦ winners.

So far neither defender is hurting, but that is about to change.

You play your ♦3 and discard dummy's ♣10.

East is squeezed. He can't throw his ♣K without letting your ♣Q become a winner. But if he discards a ♠ dummy's ♠5 will win the last trick. This is soooo much fun.

South is to play 6NT. West leads the ♥J. East wins the ♥A and returns the ♥2.

With only 11 winners you need to find one more and your prospects are quite slim.

No matter how the ♠s split only one defender will hold the Guard because only one defender can have as many as 4. IF (it's a big IF) that same defender holds the ♣K then you can squeeze him.

Can you see how the squeeze is going to work?

If you try to run your ♦s right away you will have a problem with your ♣Q later on. It will be no good as a Threat card because you will have no entry back to your hand.

The solution is the Vienna Coup. Play a ♣ to the ♣A

squeeze him.

Play 5♥ winners and the ♠K.

Drum roll please.

Play your ♥2 and dump dummy's ♦6.

East has no answer.

South is to play 6♥. West leads the ♠Q. East wins the ♠A and plays the ♦K.

Of course you have noticed that in most of these hands you are exactly one trick short. No coincidence - it's when you are one trick short and can't find another likely plan that you start to look for a squeeze.

In this hand dummy's fourth ♣ is an obvious Threat, so you should ask yourself if you can find another Threat for when ♣s don't split 3-3. Another thing you have probably noticed is that although 3-3 splits happen about 40% of the time in real life, they **NEVER** happen in these pages!

East's ♦K play helps you find the other Threat. It appears that he must hold the ♦Q also, so your ♦J is now a Threat against East. If he holds 4 ♣s you can
