3NT by North

North is to play 3NT. East leads the ♠9, taken by West with the ♠A. West next plays the ♠4.

Winners: ♠=2 ♥=2 ♦=1 ♣=3 Total = 8

You only need one more winner and if ♦s split 3-3 you can easily establish a trick in that suit. But what if ♦s split 4-2? If the ♣J falls you can get an extra ♣ trick. In fact, no matter how the ♣s are arranged you can establish your extra trick there.

First make sure that you win the second trick with the ♠K, keeping dummy's ♠Q for a later entry. Then play ♣K, and ♣Q overtaking with dummy's ♣A. Then play the ♣10, losing to the ♣J but establishing the ♣9 while you still have the ♠Q as an entry.

As you see, you couldn't set up a ♦ trick so the ♣ overtake was necessary to make the contract.

Next time they probably won't and you'll go down.

East is to play 2NT. South leads the ♣K.

Winners: ♠=1 ♥=3 ♦=2 ♣=1 Total = 7

You need to find another winner and the chances are not good. If either black suit splits 3-3 you can establish dummy's fourth card in that suit. But with South's opening lead of the ♣K it is unlikely that ♣s will split. So your only slim hope is that the ♠s split 3-3 and dummy's fourth ♠ will be a winner.

Win the first trick and play a ♠ to the ♠A. Then play another ♠. The defense will win and probably take some ♣ tricks. When they have finished and play a red card, you win it and play a third round of ♠s. If both defenders follow to all three ♠s then dummy's ♠8 is now a winner.

This time you were lucky and the ♠s split evenly.
