4♥ by South			

When partner opens 1NT, interference can easily gum up your smooth bidding sequences. Playing the lebensohl convention, your 3♥ bid shows a 5-card suit and is forcing to game.

It doesn't always work out so well, but here partner had an easy 4♥ bid.

South plays 4♥. West leads the ♠10.

Whatever you play, East takes the ♠ A K J and then plays a small ♣. West started with just one ♠.

Loser List: ♠ = 3 : ♥ = ? : ♦ = 0 : ♣ = 0 :: Total = ?

Don't let that Question Mark by the ♥ losers mislead you - if you are going to make this contract you cannot lose a ♥ trick at all! Is there any hope?

The odds aren't good, but you actually have **TWO** possibilities for success. If West holds the singleton ♥K, you can play a small ♥ to dummy's ♥A, dropping the ♥K, then finesse East out of his ♥J. Or, if East holds the singleton ♥J you can play your ♥Q, finessing West for the ♥K and at the same time smothering East's ♥J.

Which basket will you put your eggs into?

The answer is simple Bridge math! East started with 6 ♠s leaving him 7 cards outside the ♠ suit. West started with just 1 ♠, leaving him with 12 cards outside the ♠ suit. Obviously East is much more likely to have a singleton ♥ than West.

So you win the ♣A in your hand, play the ♥Q and let it ride if West does not cover.

Then you

Ahh, success.

But to tell the truth, the Bridge math wasn't really complete. Distribution-wise it was just fine, but there is also the question of strength.

The fact that East overcalled makes it more likely that he holds more high cards than West, and this skews the odds toward East holding the ♥K.

But think about it. If East does in fact hold the singleton ♥K, and if you cleverly drop it by playing dummy's ♥A it won't help you. You will then have to lose a trick to West's ♥J.

suit where you hold 8 cards.

In response to partner's Stayman bid you show your 4-card ♠ suit. Partner now bids 2NT.

In response to partner's Stayman bid you show your 4-card ♠ suit. Partner now bids 2NT.

Partner had ♥s, not ♠s. His 2NT bid is invitational, 9-10 points, so with 17 points you say 3NT.

South plays 3NT. West leads the ♦ Q.

Winner List: ♠ = 4 : ♥ = 0 : ♦ = 2 : ♣ = 2 :: Total = 8

You need one more winner. Although the ♥K is a possibility, there is a real danger of losing 4 tricks in the suit if West holds the ♥A.

A much better idea is to try to establish a ♣ trick, a

You must give up one ♣ trick in order to establish a winner there. It is important that you give up that ♣ trick to West. East is the Danger hand because if he wins a ♣ he might lead through your precarious ♥K. So win the first trick, enter dummy with a ♠ honor, and play a small ♣, finessing the ♣9 when East plays low.

West wins the ♣J, but you win the game. West cannot profitably play ♥s, so he will probably continue with another ♦. But since the ♣Q will now drop under the ♣ A K you have your ninth trick.

This ♣ holding shows an important principle. As long as the suit splits 3-2 you can establish the fourth card as a winner by ducking one trick.

The key is your ability to choose which defender you want to duck the trick into.
