♣ A 10 6

[showcards W:S5 N:S2]

The bidding has been as shown. Partner led the ♠5, dummy played the ♠2

Play the ♠7.

Partner's low ♠ lead tells you he has an honor in the suit, so it must be either the ♠Q or the ♠10. North's jump to 2NT makes it almost certain that he holds the ♠Q, so you can figure partner probably led from ♠10 x x 5.

North will take the ♠Q at trick 1, but when East wins a high ♥ he will play another ♠ through dummy's ♠K 9 to your ♠A J. Once you clear dummy's ♠ away partner will win another ♥ and be able to cash his last ♠.

Apply the Rule of 11. 11 minus 5 = 6 cards higher than the ♠5 held by dummy, you, and declarer.

Since you can see 5 of the 6 you conclude that that declarer will have to play his ♠Q to beat your ♠7.

Note that if dummy's ♠9 was played you would cover with your ♠J, leading to the same situation.

whether you play ♥A or ♥Q to the first trick; you will win your two top cards and then play your small one back to South.

So assume East actually holds the ♥K x x. If you play the ♥A to trick one, then lead ♥Q, East will hold up on the second trick, and win the third ♥. Then, when you win your ♣K you will not have a ♥ to return to partner and declarer will make the contract.

So what happens if you play the ♥Q at trick one? East could still make the contract by holding up, **but he will be afraid to do so**. After all, from his perspective it looks like South probably holds the ♥A and he will be afraid of losing the first 5 ♥ tricks, perhaps even when the ♣K finessing is working!

[showcards W:H5 N:H8]

The bidding has been as shown. Partner led the ♥5, dummy played the ♥8

Play the ♥Q.

The Rule of Eleven tells you there are 6 cards in West, North and East that are higher than the ♥5. You can see 5 of them, so that leaves just one of them for East.

South cannot have all three of the outstanding honors, because from ♥K J 10 x x his correct lead would be the Jack. So you can deduce that East must hold exactly one of ♥K, ♥J, or ♥10.

If his honor is not the ♥K then it won't matter
