you are a good bridge player!

South is to play 3NT. West leads the ♠5.

Winners: ♠=1 ♥=2 ♦=1 ♣=5 Total = 9

Wow! The winners add up to 9 already. We have assumed that ♣s will split no worse than 3-1, which is exactly how they do split. Is there any other pitfall you might need to worry about?

Just one minor problem. The ♣s will block if you are not careful! So you win the ♠A, then play dummy's ♣Q. Next you play dummy's ♣8 to your ♣K. Then your ♣A on which you put dummy's ♣7. Aha! Now when you play your ♣6 you will be able to keep the lead.

If the ♣5 and ♣6 were swapped around the contract could not be made.

As they are, though, the contract is cold. But only if

to your ♠J. Play your ♣J (and another one if necessary) to establish the ♣ suit. Win whatever red card they play next with dummy's Ace. Play the ♠Q to your ♠K and cash your established ! C(s). Dummy's other red Ace will be your ninth trick.

The more you make a point of looking for entries the easier they are to find.

You'd have to be very careless to miss this one.

South is to play 3NT. West leads the ♠5.

Winners: ♠=3 ♥=1 ♦=1 ♣=2 Total = 7

Needing two winners you will naturally consider your 5-card ♣ suit. After unblocking the ♣ A K you will need two entries to your hand; one to lead the ♣J and drive out the ♣Q, then a second to enjoy your good ♣s.

The ♠ suit will provide one entry easily, but should you depend on the ♥Q for the second entry?

No, for two reasons. Firstly the ♥Q only gives you a 50% chance of being an entry. But more importantly, you already have your two sure entries in ♠s. As long as you take the first trick with dummy's ♠A both your ♠K and ♠J can be entries.

Win the ♠A. Play off dummy's ♣ A K. Lead the ♠9

3NT by South			
Lead: ♣5			

You are sure to have a ♣ entry to dummy's ♦s, and you will still get three ♣ tricks, just a different three.

Suppose the opening lead had been a ♦ rather than a ♣.

You probably would have played the hand the same way you just did, unblock ♦s, then play ♣ A K and a low ♣ toward the ♣ J 9 trying to get a ♣ entry to dummy.

It is only because the ♣ opening lead gives you the chance for a Cheap-Trick that you are tempted to go wrong.

South is to play 3NT. West leads the ♣5. You play low from dummy and East plays the ♣6.

Winners: ♠ = 1 ♥ = 1 ♦ = 4? ♣ = 3 Total = 9

Although you have 4 ♦ winners, getting to the last couple might not be so easy. You can make 3 ♦ tricks simply by winning your ♦ A, then overtaking your ♦ J with dummy's ♦ Q. But you need that fourth ♦ winner. Can you get it?

Sure you can, by creating an entry in ♣s. It is likely from the opening lead, (and East's play of a small card), that West has led from ♣ Q 10 7 5. If you win the first trick cheaply then you will still make your ♣ A K for three ♣ tricks in all.

So don't win cheaply, win the first trick with the ♣ A. Then unblock your ♦ A J. Next play ♣ K. (on which East discards), and a small ♣ toward dummy's ♣ J 9.

3NT by South

Lead: ♠ Q

you know there is only a single ♦ left out, so you play the ♦ J to dummy's ♦ A. Now take the ♣ finesse. It works! Next play your ♦ 5 to dummy's ♦ 6 and take another ♣ finesse. Both defenders follow so your ♣s are good.

If the ♦s split 4-1 you would have found out when you cashed the ♦ K Q.

Then your chance of success goes way down. You would have to find East with the doubleton ♣ K.

South is to play 3NT. West leads the ♠ Q. East plays the ♠ K, then the ♠ 2 when you hold up.

Winners: ♠=1 ♥=0 ♦=4 ♣=1 Total = 6

You are going to have to be pretty lucky to make this contract. You cannot touch the ♥ suit because a defender would take the ♥ A and it would start raining ♠s.

So you will have to get 3 extra ♣ winners, which means the ♣ finesse absolutely MUST work.

In addition to lucky, you are going to have to be pretty good, too. You will surely have to finesse the ♣s at least twice; that means you need two dummy entries. Can you find them?

Maybe in ♦s. Play the ♦ K, then ♦ Q, watching the defender's cards carefully. When both follow twice
