ride around to dummy's ♣ K J 10 3.

If East is the one who has to play a ♣ you need to insert the ♣ 10 or ♣ J from dummy.

In either case you will no longer have a ♣ loser.

North is to play 4 ♠. East leads the ♦ J, covered by the ♦ Q and ♦ A. West returns a ♦ to the ♦ K.

You still have two losers in the ♥ suit, so the question is which way you plan to finesse the ♣s. And of course the answer is that you don't plan to finesse them at all!

Pull trumps with the ♠ A, then ♠ K. Next ruff dummy's last ♦.

Now exit with a ♥. The defenders win this and take another ♥ trick, leaving this position.

They must now break the ♣ suit for you or give you a ruff-sluff. Of course you would ruff in dummy and discard a ♣ from the 3-card holding in your hand.

If West is the one who has to play a ♣ you just let it

in dummy.

Now eliminate ♥s by playing ♥A, ♥K, and ruffing a ♥.

You are ready for the throw-in. Play a ♠ to North's ♠Q.

[showcards N:ST,CK,CT,C2 S:S8,CA,CJ,C7]

North has just taken the defender's first trick. First and only. Because if he now plays a red card you will ruff in one hand and discard a losing ♣ from the other. And if he plays a ♣ you will no longer have a ♣ loser.

Most elimination plays work on the same principle. The biggest difference is usually the technique you have to use to complete the eliminations.

Here it took two ruffs, one in each hand.

West decides a limit raise is better than just jumping to game. East has heard enough and bids the slam.

East is to play 6 ♠. South leads the ♦Q.

Your first thought is probably that if you can guess the ♣Q you will make all thirteen tricks.

So you win the ♦K and play a ♠ to your ♠K. When South discards a ♦ your second thought is probably that you **MUST** guess the ♣Q just to make twelve tricks.

Hopefully your third thought is that if you use an elimination play you won't have to guess.

Play your ♠A, leaving North with the master ♠Q. Then eliminate ♦s by playing ♦A and ruffing a ♦.
