All Pass			
3NT by North			

North is to play 3NT. East leads the ♠5.

Winners: ♠=1 ♥=2 ♦=1 ♣=5 Total = 9

Wow! The winners add up to 9 already. We have assumed that ♣s will split no worse than 3-1, which is exactly how they do split. Is there any other pitfall you might need to worry about?

Just one minor problem. The ♣s will block if you are not careful! So you win the ♠A, then play dummy's ♣Q. Next you play dummy's ♣8 to your ♣K. Then your ♣A on which you put dummy's ♣7. Aha! Now when you play your ♣6 you will be able to keep the lead.

If the ♣5 and ♣6 were swapped around the contract could not be made.

As they are, though, the contract is cold. But only if you are a good bridge player!

East is to play 3NT. South leads the ♠5.

Winners: ♠=3 ♥=1 ♦=1 ♣=2 Total = 7

Needing two winners you will naturally consider your 5-card ♣ suit. After unblocking the ♣ A K you will need two entries to your hand; one to lead the ♣J and drive out the ♣Q, then a second to enjoy your good ♣s.

The ♠ suit will provide one entry easily, but should you depend on the ♥Q for the second entry?

No, for two reasons. Firstly the ♥Q only gives you a 50% chance of being an entry. But more importantly, you already have your two sure entries in ♠s. As long as you take the first trick with dummy's ♠A both your ♠K and ♠J can be entries.

Win the ♠A. Play off dummy's ♣ A K. Lead the ♠9 to your ♠J. Play your ♣J (and another one if necessary) to establish the ♣ suit. Win whatever red card they play next with dummy's Ace. Play the ♠Q to your ♠K and cash your established ! C(s). Dummy's other red Ace will be your ninth trick.

The more you make a point of looking for entries the easier they are to find.

You'd have to be very careless to miss this one.
