Now play the ♦ A, ♦ K, and ♦ Q, discarding the ♣ 3 from your hand.

Then lead dummy's ♣ 7 to your ♣ K.

[showcards N:ST,CA,C9 E:DJ,D9,CJ S:HA,C8,C6 W:SJ,CQ,CT]

Here you are in your hand.

Only East can guard dummy's ♠ 10, and only East can guard dummy's ♣ 9.

So you play your ♥ A and East must give up one of his guards. If he holds on to the ♠ J then you toss dummy's useless ♠ 10. If he throws the ♠ J then you toss dummy's ♣ 9.

North is to play 6♥. East leads the ♠ A, then ♠ K.

When you looked at just your and dummy's cards on the previous page it may have looked impossible to find a twelfth winner.

Even looking at all four hands here it is still very difficult to come up with a plan.

Here's a hint: If East holds 3 ♣s, (and you see that he does), can you squeeze him in ♣s and ♠s?

Of course you ruffed the ♠ K.

The big problem with trying to squeeze East in the black suits right now is that West actually holds a ♠ guard. But you can fix that.

Play dummy's ♥ Q and ♥ 10, then ruff a ♠, then pull the last trump.

At trick 2 you play a ♠.

Of course South will win this with his ♠K.

And he will no doubt continue with the ♠A and ♠9.

You discard 2 ♦s from dummy and a ♣ from your hand.

North cannot spare either a ♥ or a ♦ so he also throws a ♣.

Remember this position

South will almost surely cash his ♠2.

You and dummy both discard a ♣ and North also must discard a ♣.

It doesn't matter what South plays next, let's say it is a ♣.

In your hand with the ♣K, you now play the ♣A.

North is truly squeezed. If he discards a ♥, dummy's ♥5 will become a winner. but if he discards a ♦ then you will get a third ♦ trick and the contract.

Since it was South who started the squeeze by cashing his last ♠, this is called a Suicide Squeeze. **BUT**, what if South had not cashed that ♠?

Here is the position you were supposed to remember

Suppose South is a really expert defender and avoids the Suicide Squeeze by just refusing to cash his winning ♠. It doesn't matter what else he plays instead, so let us assume it is a ♣.

You win in your hand and establish a ♦ winner by playing ♦A, ♦K, and a small ♦. North wins but cannot reach his partner's hand for that good ♠.

East is to play 3NT. South leads the ♠3. North plays the ♠5.

From the opening lead of ♠3 and North's play of ♠5 you should have deduced that South held five ♠s to the A K. Therefore if you lose a trick in any other suit South will be able to take 4 ♠ tricks and defeat you.

You have 8 winners, and if North holds 4+ ♥s AND 3+ ♦s then only he can guard the two suits.

But how can you squeeze him?

The answer to that question is that **YOU** cannot squeeze him.

But maybe you can make his partner do the job for you.
