3NT by North you.			

North is to play 3NT. East leads the ♠3. West plays the ♠5.

From the opening lead of ♠3 and West's play of ♠5 you should have deduced that East held five ♠s to the A K. Therefore if you lose a trick in any other suit East will be able to take 4 ♠ tricks and defeat you.

You have 8 winners, and if West holds 4+ ♥s AND 3+ ♦s then only he can guard the two suits.

But how can you squeeze him?

The answer to that question is that **YOU** cannot squeeze him.

But maybe you can make his partner do the job for

At trick 2 you play a ♠.

Of course East will win this with his ♠K.

And he will no doubt continue with the ♠A and ♠9.

You discard 2 ♦s from dummy and a ♣ from your hand.

West cannot spare either a ♥ or a ♦ so he also throws a ♣.

Remember this position

East will almost surely cash his ♠2.

You and dummy both discard a ♣ and West also must discard a ♣.

It doesn't matter what East plays next, let's say it is a ♣.

In your hand with the ♣K, you now play the ♣A.

West is truly squeezed. If he discards a ♥, dummy's ♥5 will become a winner. but if he discards a ♦ then you will get a third ♦ trick and the contract.

Since it was East who started the squeeze by cashing his last ♠, this is called a Suicide Squeeze. **BUT**, what if East had not cashed that ♠?

Here is the position you were supposed to remember

Suppose East is a really expert defender and avoids the Suicide Squeeze by just refusing to cash his winning ♠. It doesn't matter what else he plays instead, so let us assume it is a ♣.

You win in your hand and establish a ♦ winner by playing ♦A, ♦K, and a small ♦. West wins but cannot reach his partner's hand for that good ♠.

All Pass

7♣ by East
into a Threat card against North's ♦Q.

But, the ♠J is already a Threat card against South's ♠Q.

Play your ♣J and ♣9, discarding the ♦8 and the ♥4 from dummy.

South can afford to discard the ♠9 and the ♥5.

North can spare his two ♠s.

[showcards N:SJ,HK,H7,DJ E:HJ,HT,H2,DQ S:HA,H6,H3,C8 W:SQ,HQ,H9,H8]

You are there. Play your ♣8.

South cannot throw the ♠Q, so he gives up the ♥8. Dummy's ♠J is of no further value so you dump it.

North cannot throw the ♦Q, so he gives up the ♥2.

And you take the last three tricks with the ♥ suit. There were only two defenders; one of them had to guard ♠s and the other had to guard ♦s. There was nobody left to guard ♥s.

East is to play 7♣. South leads the ♠K.

At first glance this doesn't appear to be a difficult hand. You expect to win the opening lead, pull trumps, then establish a ♦ winner by playing ♦K, ♦A, and ruffing a ♦. As long as they split 3-2 you could reach dummy's ♦ winner with the ♥K.

So you take the ♠A, pull three rounds of trumps and play ♦K.

But when you lead to the ♦A South discards a small ♠.

Time to rethink. You are in dummy now, and you can ruff a ♦, return with the ♥K and ruff another ♦. The last ♦ would be good but you'd have no way to reach it.

Think squeeze instead. Ruff a ♦. This turns the ♦J

6♥ by South

either one is going to do the same thing. Assume West wins the ♦ 10.

He will then play the ♠ K, which you must ruff in your hand.

Now play a small ♦ to dummy's ♦ K.

[showcards N:HJ,D7,C8,C6 E:DQ,DJ,CJ,CT S:DA,D8,CQ,C4 W:SJ,S8,S6,S5]

You are in dummy, ready for the squeeze.

Play dummy's ♥ J.

East gets to choose his own fate - discarding a protector in one of the two suits. Of course, whichever suit he discards you will throw the opposite one.

Yet another slam, courtesy of the Squeeze Play!

South is to play 6♥. West leads the ♠ A.

If ♦s and ♣s split nicely this would be an easy slam. But with that wild ♠ bid by West you can't expect decent splits.

So you ruff the ♠, pull trumps in three rounds, then play ♣ A K and get the bad news when West discards a ♠.

You now know that East guards the ♣s. And since West had 3 ♥s and a very long ♠ suit it is pretty likely that East guards the ♦s also. You will try to squeeze East in ♣s and ♦s, but first you must lose a trick to rectify the count.

So you play a low ♦ from each hand.

It doesn't matter which defender takes the ♦, since
