♠ J if you hadn't played this way.

You are East. The bidding has been as shown. You led the ♠ A, West plays the ♠ 9, North the ♠ 5. You assume West has signaled you to continue ♠ s, so you play the ♠ Q. On this trick West plays the ♠ 3 and North the ♠ 8. How will you continue?

You know that both West and North are now void of ♠ s. You might just switch suits, but you have a better choice.

If you play your ♠ Q, West won't bother ruffing, North **WILL** ruff and dummy's ♠ J will be established as a winner.

The best procedure is to lead a low ♠ . West will ruff and North will over-ruff but by playing this way you stop the establishment of South's ♠ J. As you can see, North would have been able to discard a loser on that

Only by watching what West plays. On the ♦J West played the ♦2, a low card signaling that he held an ODD number of ♦s. ODD must be either one or three so when he followed to the next ♦ you know he started with three. A little bit of counting tells you that South started with the doubleton Jack, so you want to win the second ♦ trick.

This defense holds South to one ♦ tricks, if you had let him win the second one he would have had 9 tricks.

[showcards S:DJ W:D2 N:D4]

You are East. The bidding has been as shown.

Partner led the ♥Q, you played low and South won the ♥A.

South now plays the ♦J on which West plays the ♦2. What do you play now, and what is your plan.

Play the ♦3 and when South plays another ♦ win with your ♦A.

North hoped his ♦ suit would provide enough tricks to make the game. You can see that there is no entry to the North hand EXCEPT in ♦s, so you want to win your ♦A on the trick that South plays his last ♦. How can you tell which trick that is?
