The odds aren't good, but you actually have **TWO** possibilities for success. If East holds the singleton ♥K, you can play a small ♥ to dummy's ♥A, dropping the ♥K, then finesse West out of his ♥J. Or, if West holds the singleton ♥J you can play your ♥Q, finessing East for the ♥K and at the same time smothering West's ♥J.

Which basket will you put your eggs into?

The answer is simple Bridge math! West started with 6 ♠s leaving him 7 cards outside the ♠ suit. East started with just 1 ♠, leaving him with 12 cards outside the ♠ suit. Obviously West is much more likely to have a singleton ♥ than East.

So you win the ♣A in your hand, play the ♥Q and let it ride if East does not cover.

Then you

Ahh, success.

But to tell the truth, the Bridge math wasn't really complete. Distribution-wise it was just fine, but there is also the question of strength.

The fact that West overcalled makes it more likely that he holds more high cards than East, and this skews the odds toward West holding the ♥K.

But think about it. If West does in fact hold the singleton ♥K, and if you cleverly drop it by playing dummy's ♥A it won't help you. You will then have to lose a trick to East's ♥J.

When partner opens 1NT, interference can easily gum up your smooth bidding sequences. Playing the lebensohl convention, your 3♥ bid shows a 5-card suit and is forcing to game.

It doesn't always work out so well, but here partner had an easy 4♥ bid.

North plays 4♥. East leads the ♠10.

Whatever you play, West takes the ♠ A K J and then plays a small ♣. East started with just one ♠.

Loser List: ♠ = 3 : ♥ = ? : ♦ = 0 : ♣ = 0 :: Total = ?

Don't let that Question Mark by the ♥ losers mislead you - if you are going to make this contract you cannot lose a ♥ trick at all! Is there any hope?

 suit where you hold 8 cards.

In response to partner's Stayman bid you show your 4-card ♠ suit. Partner now bids 2NT.

In response to partner's Stayman bid you show your 4-card ♠ suit. Partner now bids 2NT.

Partner had ♥s, not ♠s. His 2NT bid is invitational, 9-10 points, so with 17 points you say 3NT.

East plays 3NT. South leads the ♦Q.

Winner List: ♠ = 4 : ♥ = 0 : ♦ = 2 : ♣ = 2 :: Total = 8

You need one more winner. Although the ♥K is a possibility, there is a real danger of losing 4 tricks in the suit if South holds the ♥A.

A much better idea is to try to establish a ♣ trick, a

You must give up one ♣ trick in order to establish a winner there. It is important that you give up that ♣ trick to South. North is the Danger hand because if he wins a ♣ he might lead through your precarious ♥K. So win the first trick, enter dummy with a ♠ honor, and play a small ♣, finessing the ♣9 when North plays low.

South wins the ♣J, but you win the game. South cannot profitably play ♥s, so he will probably continue with another ♦. But since the ♣Q will now drop under the ♣ A K you have your ninth trick.

This ♣ holding shows an important principle. As long as the suit splits 3-2 you can establish the fourth card as a winner by ducking one trick.

The key is your ability to choose which defender you want to duck the trick into.

With 12 points and a 4-card Major suit you automatically use Stayman; bid 2♣. Partner responds 2♦.

With 12 points and a 4-card Major suit you automatically use Stayman; bid 2♣. Partner responds 2♦.

You have plenty of points for game; with no 4-4 Major suit fit you bid 3NT.

The contract would be 3NT played by North.

South plays 3NT. West leads the ♥6.

First big decision. Which ♥ do you play from dummy?

Winner List: ♠ = 2 : ♥ = 1 : ♦ = 3 : ♣ = 2 :: Total

The Rule of Eleven tells you there are 5 ♥s in North, East and South which are higher than the ♥6. You and dummy hold 4 of them so you can place East with just 1. The missing high cards are ♥ A J 10 9. Elementary, Watson; East must hold the ♥10 because from ♥ A J 10 6, ♥ A 10 9 6 or ♥ J 10 9 6 West would **NOT** have led the ♥6. So your first smart move is to play dummy's ♥Q, which holds the trick. What next?

You need to find one more winner and your best chance is the ♣ suit. You will need a 3-2 split in the suit, but you must establish the ♣ winner without letting East get the lead. East is the Danger Hand because he can play a ♥ through your ♥ K 7. Therefore it would be unwise to play ♣A, ♣K, then another ♣ because East is very likely to be the one with 3 ♣s.

Did you get it? Play a small ♣ toward your hand and put on the ♣10 if East plays low. You don't expect the ♣10 to win the trick, it is more of a duck than a finesse. West takes this with his ♣J but he can do you no harm. If he continues with ♥s your ♥K will be a second stopper. If he plays any other suit you will scamper home with your 9 tricks, which of course now include those 3 ♣s.

A duck into the safe hand allowed you to establish the ♣ winner you needed.

But what if East had figured out what you were going to try and played his ♣Q when you led from dummy?

He would have been very, very sorry. You would have had no choice but to win the trick, and when West's ♣J fell on the next trick you would have all 4 ♣ tricks!
