2 ♠ by North
ruffing it in dummy.

You open 1 ♠. Partner responds 2 ♠. What is your bid?

This was easy. You had a minimum opening bid and partner gave a minimum response. You pass.

North plays 2 ♠. East leads the ♥Q.

North plays 2 ♠. East leads the ♥Q, West plays ♥9.

Losers: ♠ 0 : ♥ 1 : ♦ 3 : ♣ 2 : Total = 6

You have one loser too many. It doesn't seem you can do anything about the 3 ♦s but you might be able to avoid one of the ♣s if you are lucky. However, you can probably get rid of the ♥ loser by

One small worry - West's play of the ♥9 might be the start of a doubleton signal. If so, he may be able to over-ruff dummy. You should have played the ♥A on the first trick. Next you pull two rounds of trumps with ♠A, ♠K. Only then do you play ♥K and ♥8 ruffing with dummy's last trump. Fortunately West only had two trumps and cannot over-ruff, even though he is out of ♥s.

When you get back in you will pull trumps and lead toward dummy's ♣ K J, hoping to make a good guess.

As you see, the ♣ A Q were sitting badly and you could not win a ♣ trick.

The only way to make the contract was to ruff a ♥ in dummy.

3NT by East			

With 14 points you will naturally open the bidding. You should open a 4-card ♦ suit rather than a 3-card ♣ suit. Partner responds 1♥.

Partner might have bid a 4-card suit so you cannot support ♥s with only 3. Instead, you describe your balanced, minimum opener by bidding 1NT. Partner then bids 3NT and you pass.

East plays 3NT. South leads the ♣K.

East plays 3NT. South leads the ♣K.

Winners: ♠ 3 : ♥ 2 : ♦ 1 : ♣ 1 : Total = 7

You need to find 2 more winners and they can come from the ♦ suit. You can finesse South for the ♦K. If he has it then you will get 3 extra tricks, but even if North has the ♦K you can still make 2 winners.

The problem is that if you win the first or second ♣ and then try the ♦ finesse North may win and still have a ♣ to lead back to his partner. So you should hold up the ♣A until the third round of the suit. Then if North wins the ♦K he may not have another ♣.

Imagine that you had won either the first or second ♣. When North won the ♦K he would still have had a ♣ to return to South's hand. You would have lost 4 ♣ tricks and the ♦K.

But what if North **DID** have another ♣ when he won the ♦K?

Suppose you held up until the third ♣. When North won the ♦K here he had a fourth ♣ to return to South's hand. That means the ♣ suit split 4-4 so you would have lost only 3 ♣ tricks and the ♦K.

4♠ by South

South plays 4♠. West leads the ♦A, then ♦K, then ♦J. East discards on the second ♦ and ruffs the third one with the ♠T.

Losers: ♠ 0? : ♥ 1 : ♦ 2? : ♣ 0 : Total = 3?

The loser count looks a little messy - that's because of the circumstances. If you could have just played three rounds of ♠s you would probably have had 0 losers, and if you ruff this ♦ you will have only 2 ♦ losers, but maybe create a ♠ loser.

But though the loser count is confused your plan should not be. You **DO NOT** over-ruff the ♠10. Instead you discard your one ♥ loser (a loser-on-loser play). East can have this trick but whatever he returns you will win, pull trumps in **THREE** rounds if necessary, and take the rest of the tricks.

Discarding the ♥ loser instead of over-ruffing was the winning Plan. If you had over-ruffed you would have lost the ♥, but you would also have to lose a trump. You made a good play.

But did you notice that West made a bad play? He should have cashed his ♥A before he led the third ♦ for his partner to ruff. Then when his partner ruffed with the ♠10 your goose would have been cooked.

You have an easy 1♠ opening bid.

But West overcalls 2♦ and partner bids 3♦.

You should be certain to have a partnership agreement on the meaning of a cue-bid after an overcall.

Most good players use it to show support for opener's suit and at least 11 points. In other words, a hand with which you would have made a limit-raise or better.

So you bid the ♠ game.

South plays 4♠. West leads the ♦A, then ♦K, then ♦J. East discards on the second ♦ and ruffs the third one with the ♠10.
