Lead: ♣A

You are West. The bidding has been as shown.

Partner led the ♣A. Seeing your ♣3 he next played the ♦A. What will you play on this trick?

Play the ♦2.

Normally with this holding you would play the ♦9 to encourage East to play a second ♦ through dummy's ♦Q 10.

But this time you really want him to take his ♣K. So play the discouraging ♦2 and hope he gets the message to go back to ♣s. If he does play the ♣K next it will win and he can then give you a ♣ ruff.

Lead: ♥5			

You are East. The bidding has been as shown.

Partner led the ♥5, you put on the ♥J, South won with the ♥A. The second trick was ♦A, ♦2, ♦3, ♦5. The third trick was ♦J, ♦6, ♦8, ♦7. South then put the ♣Q on the table.

Play the ♣A.

Does it look to you like South is trying to create an entry to dummy so he can cash the 2 ♦ winners? That's what he wants it to look like, hoping someone holds up their ♣A.

But don't believe Declarer, believe your partner. On the first ♦ West played the ♦2. On the second ♦ he played the ♦6. He has an odd number of ♦s, obviously 3. And South must also have a third one, so he is up to some trickery with that ♣Q.

So grab your ♣A and return partner's ♥ suit.

then has no way to get rid of that ♣ loser when the finesse fails.

If you had not been paying attention to East's signal you might have decided to risk a ♣ lead - with a disastrous result.

You are West. The bidding has been as shown. The 2♥ bid was a transfer. The 5NT bid meant to choose either 6♠ or 6NT. North liked the suit. Partner led the ♠5, won by North's ♠Q. North pulls one more trump with his ♠A, then wins three high ♦s. Next comes dummy's ♥A on which he plays the ♥3 and East plays the ♥9. Then he leads dummy's ♥6 which you win with the ♥Q. On this trick North drops the ♥J and East the ♥2. It is your play.

Play the ♥K.

If you believe North is now out of ♥s then you should not play your ♥K because it would give him a ruff-sluff.

But you shouldn't believe North when your partner has sent you a clear signal that he holds an EVEN number of ♥s. In this case an even number must be 4 which means that North has one more ♥. So you play your ♥K. He ruffs in dummy of course, but

You are West. The bidding has been as shown. You led the ♣ A, East played the ♣ 2 and South the ♣ 9. What should you play to the second trick?

Play the ♣ 6.

On first thought East's ♣ 2 seems to be a discouraging signal. Think again.

After the first trick you know the location of every ♣ except the ♣ Q and ♣ J. If East started with ♣ J 2 he would have signaled with the ♣ J. If East started with ♣ Q J 2 he would have signaled with the ♣ Q. Since he did neither he started either with singleton ♣ 2 or with ♣ Q 2. In either case you should play a low ♣ now which he will either win with his ♣ Q or he will ruff.

It turns out that he wins with the ♣ Q, then leads a ♠ back to your ♠ A Q.
