Lead: ♥9

You are East. The bidding has been as shown.

Partner led the ♥9, taken by dummy's ♥10. The ♠4 is then played from dummy. Do you play low? or split your honors?

Play the ♠J (or ♠Q).

You should always make a point count check as soon as you see dummy. South's 2NT promises 20 or 21 points, North has 14 and you have 3; total = 37 or 38. Therefore West must have either 2 or 3 points. He cannot have two Jacks because you can see all four of them. Likewise he cannot have a Queen because you can see three of them and his ♥ lead (top of nothing) denied that Queen.

It follows that West **MUST** have a King, and it must be ♣s or ♦s since he has denied any ♥ Honor.

Since West will definitely win his King, you need to take one trick yourself, and the best way to do that is to split your Honors to establish one ♠ winner.

South has no defense to this, but if you had played low he would have played the ♠10 and made the slam.

twice as likely as ♣ K Q.

You are West. The bidding has been as shown.

You lead the ♠ 10; low cards from North and East, won by South with the ♠ A.

South next plays the ♣ 3 and you must decide whether to split your ♣ K Q.

Play the ♣ 4.

If you split your Honors, playing the ♣ Q perhaps, dummy's ♣ A will take the trick and South will later play through your ♣ K toward dummy's ♣ J 9 5. Played in this way he will establish 3 ♣ winners (which he needs for the contract).

If you play low, he **MIGHT** finesse the ♣ J and again establish 3 ♣ winners. But South's correct play would be to put on dummy's ♣ 9, finessing West for the ♣ 10. This is because ♣ K 10 **or** ♣ Q 10 are

If he does play this way East will win the ♣ 10 and your ♣ K Q will get one more trick.

Lead: ♦ J

♣K and you play your ♣A then you have handed him the contract.

By playing low you give him a guess to make. If he plays the ♣K he will make the contract, but if he plays the ♣J he will go down. He will probably play the ♣J, figuring you wouldn't have the nerve to duck with the ♣A. He'll know better next time he plays against you.

You are East. The bidding has been as shown, (wild).

Partner led the ♦J; ♦Q from dummy, ♦K from you and ruffed by South.

South then pulls two rounds of trumps, (West discards on the second one), followed by his ♠Q, dummy's ♠A K and dummy's ♦A. South discards ♣s on the last two cards.

The ♣6 is then played from dummy and you must make a decision - ♣A or ♣2?

Play the ♣2.

You have a full count on South's hand. He started with 2 ♠s, 7 ♥s, and no ♦s. His other 4 cards must have been ♣s, and he has discarded 2 of them.

So he has 2 ♣s left in his hand. If one of them is the

♣A, then play ♠K, ♠Q and a third ♠, hoping East holds ♠A x x x.

You are West. The bidding has been as shown.

You lead the ♦5; ♦3, ♦10 and won by South with ♦K. South now leads the ♣9 from his hand

Play the ♣A.

First ask yourself "Where are the ♦A and ♦Q?" East doesn't have either one or he would have played it at the first trick. So South has both of them. So with those 3 tricks and the 5 ♥s in dummy South only needs to find one more winner. Assuming he has the ♣K, (or why play the suit), if you play low he will find that one more winner whichever high ♣ he plays.

Next ask yourself "Where is the ♠A?" Clearly East **DOES** have this card; otherwise South has his 9 tricks.

So the way to beat the contract is to go up with your
