3NT by South
Lead: ♠5

South is to play 3NT. West leads the ♠5, dummy plays the ♠2 and East the ♠Q.

Winners: ♠=1 ♥=2 ♦=2 ♣=3 Total = 8

Before worrying about where that one winner is going to come from you need to decide what to do with the opening lead. A good guideline is to hold up unless you fear a switch. Here, with all other suits well protected you would welcome a switch, so you let East win the ♠Q. East then plays the ♠8. Do you hold up again?

It probably doesn't matter, but since you cannot possibly win more than 10 tricks you might just as well hold up again. West wins the ♠J then plays the ♠3. East discards a ♥ on the third ♠.

OK, now it is time to figure out where that extra trick is coming from. Not much figuring is needed, it must come from the ♦ suit. Since you are missing 5 cards including the Queen, the odds favor a finesse over playing for the drop. And, since you have the option of finessing either defender are you going to finesse into the one who can set you or into the safe one?

You play the ♦K from your hand, then a small ♦, and West plays low.

Silly question. Of course you finesse into the safe hand: dummy's ♦10 wins the trick - and the game - and the overtrick.

Actually the odds slightly favored East holding the ♦Q because East started with only 2 ♠s compared to West's 5 ♠s. Therefore East had 11 spaces which could hold the ♦Q whereas West only had 8 spaces.

But in a situation like this you don't play odds. By finessing West you guaranteed making the contract even if the finesse lost because East had no more ♠s. Even a losing ♦ finesse would have established the one trick you needed.

6♠ by South
Lead: ♥Q

South is to play 6♠ after North's Stayman bid. West leads the ♥Q, dummy plays the ♥5 and East the ♥2.

Losers: ♠=0 ♥=1 ♦=0 ♣=1 Total = 2

This looks like a very simple plan. Since the hands have mirrored distribution there will be no discards anywhere. That means the ♣K **MUST** be in West's hand or you will go down. But is that all there is to it?

You have won the ♥A.

West plays low.

If West has ♣ K x or ♣ K x x then yes, that's all there is to it. But if he has ♣ K x x x then you won't have enough entries to your hand unless you take the first ♣ finesse **BEFORE** you start on trumps.

That is why you win the ♥A and immediately play a ♣ to dummy's ♣J, which holds the trick. Then pull trumps, (it takes 4 rounds), ending in your hand.

West plays low again.

Your ♣10, putting on the ♣5 from dummy when West plays low again. This lets you stay in your hand to play another ♣ to the ♣Q, picking up all four ♣ tricks and the slam.

This Deal took a lot of care and attention. As you can see you had to take one ♣ finesse before you drew trumps because you were in your hand right then and you could only get back one more time.

But also you had to play to one of dummy's honors first so you could retain that ♣5 for letting you stay in your hand to make the third finesse. Bridge is great.
