You dealt this hand.

With 23 points you naturally open 2♣. Partner responds 2♦.

You have 23 points and no 5-card suit. Since your hand is balanced you bid 2NT. Partner raises to 3NT and you pass.

With only 2 points you make a Negative 2♦ response to partner's 2♣ opener. He now bids 2NT. What is your bid?

This isn't as clear-cut a decision as you might think at first. Partner is showing 22-24 points, and even though you only have 2 points it is possible that the partnership total could be 26. The thing that should convince you to pass is that a 24-2 point split doesn't play nearly as well as say a 13-13 split would. Lack of transportation would likely kill any chance of 3NT (or 4♠). So you pass.

With only 4 points you make a Negative 2♦ response to partner's 2♣ opener. He now bids 2NT. What is your bid?

True, 4 points isn't much. But added to partner's 22-24 it becomes enough for a game. Your problem isn't whether to bid to the game or not, (you definitely will), but whether you should use Stayman to find out if there is a 4-4 ♠ fit. You decide not to do this because your 4-3-3-3 distribution removes the possibility of you getting any ruffs. So you bid 3NT.

4♥ by South

You dealt this hand.

You only have 20 points, but you have 9 playing tricks. You have two choices, open 4♥ or open 2♣. Usually 4♥ would show a slightly weaker hand than this, so you bid 2♣. Partner responds 2♦.

Of course you bid your 8-card suit. But no jumping, just bid 2♥. Partner now says 2NT.

Partner has between 3 and 7 points. Somewhere in those points might be the one trick you need, but you don't have any scientific way of finding out. So just bid 4♥ and hope. (There it is, the ♣T.)
