6NT by North

Now play the ♥10, and when East follows you are safe to overtake with dummy's ♥J since you can tell that West did not start with 4 ♥s. In fact, West shows out so it is East who started with 4 ♥s but that won't be a problem for you. Play another ♣ from dummy, finessing the ♣T which wins.

Now play your ♥3 toward dummy, finessing the ♥8 when East follows with a low card. Play dummy's two ♥ winners, discarding ♦s, then the low ♣ to your ♣J. Wow.

The making of a Plan is a very important step in being a good Declarer.

And as you have figured by now, assessing how many entries you are going to need is big part of that plan. Like here, if you had won a single ♥ trick in your hand then you wouldn't have had the three entries to dummy.

North is to play 6NT. East leads the ♠T.

Winners: ♠=2 ♥=5 ♦=2 ♣=1 Total = 10

You need two more winners and the best bet is to try to pick up three ♣ tricks. You will need the ♣K and ♣Q to lie in different hands, or both of them to be with West. That is about a 75% chance.

But you may need to make 3 finesses, so that means 3 entries to dummy, all of which must be in the ♥ suit. Can it be done?

Of course it can. Win the ♠ lead in your hand and play the ♥K, overtaking with dummy's ♥A. Now play a ♣ to your ♣9, which loses to East's ♣K. East plays another ♠.

6♠ by East

Win the opening lead and lay down your ♣J. The defense is helpless. If they take the ♣J with the ♣K, then you have a dummy entry in the form of the ♣Q. If they refuse to take the trick you will counter by next laying down the ♣A, then ruffing a third ♣ to get to dummy and the two golden eggs.

The first time I ever saw this type of play in a book I fell in love with it.

My dream is that someday I will get a chance to use it at the table. If you ever do be sure and email me.

Pretty bold bidding by East, but partner DID make a positive response. East is to play 6♠. South leads the ♦Q.

Losers: ♠=0 ♥=0 ♦=2 ♣=1 Total = 3

OK, the plan is to get over to dummy for those two ♥ winners.

If you just play a small ♣ toward the ♣Q that will work whenever South holds the ♣K.

How about playing ♣A an a small ♣, planning on ruffing your third ♣ to get to dummy? Naaah. They will win the second ♣ and play a trump.

There is actually a play that is 100% certain, no matter who holds the ♣K.
